SUBERI	JASON CARDONE /ISORY PATENT EXAMINER	AC	

Continuation of 11. does NOT place the application in condition for allowance because: The remarks presented in the after-final are not deemed fully persuasive. The first point of contention involves the 112-type rejection issued. The applicant contends that claims 1, 13 and 25 do not state the second server as sending the transfer ticket. The examiner disagrees. The claim language reads, "generating a transfer ticket from the first server to the client that includes an identifier identifying the particular file on the second server..." This language shows the transfer ticket generation occurring on the second server. The second point of contention also involves claims 1, 13 and 25. The applicant contends that neither prior arts teach the claimed features. The claims are teaching how a client requests to access data from a first server, yet accesses that data from a second server after being authorized. The FileNet prior art teaches replicating the file across servers (see Replication, FileNet) and permitting only authorized users to access the file (see Five levels of security, FileNet). Plus the FileNet art teaches how load balancing is provided to access a file from a server different than the one the client originally made the request to (see Automatic Load Balancing, FileNet).
